

ČSOB Energy Policy

The management of ČSOB defines this Energy Policy as a basic framework for the energy management system (EnMS) following the ISO 50001 standard.

Basic binding aspects of the ČSOB energy policy are as follows:

- a) to treat the energy use effectively,
- b) to monitor energy consumption within the company and define energy objectives and action plans leading to continual decrease of the energy requirements of buildings and devices,
- c) to reflect the low energy consumption when purchasing energy products and services, to promote the purchase of energy efficient products and services,
- d) to manage its activities so that the use of natural resources is as efficient as possible and thereby reducing the impact on the environment,
- e) to meet regulatory requirements of the Czech Republic and the EU as well as additional requirements in the energy field relating to the activities of the company
- f) to reduce the production of CO₂

ČSOB wants to comply with the energy policy and meet the energy related goals of the company by the following measures:

- a) most efficient and effective energy management,
- b) permanent reduction of the energy requirements of buildings and equipment,
- c) monitoring of key parameters in the field of energy, freeing resources and setting specific responsibility for implementation and reviewing energy objectives, target values,
- d) communication and continuous training and increasing the qualification level and awareness of the employees and the persons working for the company in energy management area,
- e) performing internal audits of the energy management system, periodic review of the system EnMS by the company management and adoption of measures for continuous improvement of this system.
